****User Story Review****

****Parameter Scores (out of 20)****

Parameter	Description	Score (out of 20)
Clarity	The story is easy to understand and unambiguous?	16
Completeness	Are acceptance criteria and preconditions well-defined?	14
Business Value Alignment	Does it reflect tangible healthcare value (e.g., patient safety, compliance, operational efficiency)?	19
Testability	Can QA engineers easily derive test cases from it?	17
Technical Feasibility	Is it practically implementable within typical healthcare system constraints?	18

****Overall Quality Score (out of 100)****

84 / 100

****Improvement Areas****

- **Add explicit acceptance criteria for prescription error handling**:** Clearly define the expected behavior when a prescription error occurs, including the steps to be taken by the system and the doctor.
- **Specify validation rules for dosage and duplicate drugs**:** Define the rules for validating prescription dosages and preventing duplicate drugs from being prescribed.
- **Include system actor details for approval workflow**:** Specify the roles and responsibilities of the system actors involved in the approval workflow, including the doctor, pharmacist, and system administrators.

Now copying the api with two input parameters. i.e trying to call two different models at two groq components we use

To make the api work, removed stream=false from parameters and session id removed from body

Updated the model names, highlighted the same

Beautifying the result using llm

User Story Review

Parameter Scores (out of 20)

Parameter	Description	Score
Clarity	The story is easy to understand, but lacks detailed acceptance criteria.	16
Completeness	Preconditions not clearly mentioned.	14
Business Value	Strong healthcare relevance and compliance focus.	19
Testability	Can be tested through prescription workflow automation.	17
Technical Feasibility	Technically feasible with EHR integration.	18

Overall Quality Score: 84 / 100
